

Outbreak Update

January 4, 2021

I apologize for all the emails but things are changing by the minute at the Manor regarding the outbreak. We rapid tested one of the sitters because we suspected that she had had contact with one of the family members that was also rapid tested and was positive and she also came out positive. As the rapid test is only 70% effective, we are doing PCR tests on the sitter and all residents impacted.

As a precaution, this sitter had contact with a number of residents in B/C wing who have had contact with their eating mates in the dining room. As a result, we have decided to do reverse isolation in B/C wing. That means that all residents will be confined to their rooms and the wanderers will be placed in full PPE. We will be adding additional staff to B/C wing to support the team.

We will keep you informed as the situation evolves.
