

Research Study Survey

We have been invited to participate in a research study (staff and residents). The goal of this study is to build a better understanding about how widespread COVID-19 is in Canada among our most vulnerable and high-risk populations. The research team is hoping to collect dried blood spot samples from you to look for the presence of antibodies against COVID-19. Personally I am anxious to know how effective the vaccine is in producing antibodies in my body. Please join me in this study. There is more information and posters attached to this newsletter. Thank you.
